# **I. EXPERIMENTAL TECHNIQUES**

## **DESIGN:**

All treatments within an experiment were in a randomized complete block design with three replications per treatment. Each treated plot was two rows wide by twenty-five to forty-five feet long, depending on the experiment. An untreated row separated each plot except in the no-tillage studies.

## **APPLICATION:**

All treatments were applied with pressurized CO<sub>2</sub> sprayer at 25 GPA. unless indicated otherwise. Plots were incorporated with a field cultivator at both the Lexington and Princeton locations.

## **EVALUATION:**

Weed control was evaluated on a 0 to 100 scale with 0 representing no control and 100 representing total control. Crop injury was also based on a 0 to 100 scale with 0 representing no injury and 100 representing crop death

## **CULTIVATION:**

Plots were not cultivated except where indicated.

## **SPECIFIC EXPERIMENTAL INFORMATION:**

The following information is found at the end of each summary:

(A) location, (B) fertilization, (C) soil type, (D) pH, (E) organic matter, (F) treatment date(s), (H) planting dates, (I) crop and/or weed growth stage for postemergence application.
