EXCELLENT = 9+ GOOD = 8-9 FAIR = 6-7 POOR = 5 OR LESS - INSUFFICIENT DATA

1 This table should be used only as a guide. The relative response value is based on a numerical scale from 0-9 comparing the effectiveness of herbicides to a particular weed. Under certain weather or environmental conditions, a herbicide may perform better or worse than indicated in the table. If a farmer is getting satisfactory results under his conditions, he should not necessarily change products as a result of the information in the table.

2 A rating of 3 or less will not result in a crop yield loss under normal conditions. Certain soybean varieties vary in their injury response to a herbicide treatment.

3 Crop response and velvetleaf control may be less with Phoenix than with Cobra.

4 Apply only to selected soybean cultivars designated with GENETIC resistance /tolerance to Roundup Ready (RR-soybean) or Sulfonyleurea Tolerant (STS-soybean) or Liberty Link (LL-soybean). Consult label for directions.

5 Examples of specific glyphosate products are listed on page 22.

6 Control of volunteer plants from previous herbicide-resistant corn hybrids may NOT be successful depending on source of herbicide tolerance.

* Will not control biotypes resistant to the class of chemistry associated with this herbicide.
